RAYANN SAGNON

ELECTRICAL ENGINEERING | SYSTEMS ENGINEERING | ELECTRONICS & TELEMETRY

Ottawa, Ontario | rsagn083@uottawa.ca
rayannsagnon.com | linkedin.com/in/rayannsagnon | github.com/RayannSagnon

PROFILE

Second-year electrical engineering student specializing in systems engineering at the University of Ottawa. With uOSupermileage's electrical team, designed a two-layer automotive dashboard PCB in Altium from schematic to manufacturing files, and now designing a telemetry sensor board.

EDUCATION

Bachelor of Applied Science in Electrical Engineering | Systems Engineering specialization
University of Ottawa, Ottawa | September 2025 - April 2029 | Management and Entrepreneurship option
Relevant coursework: Circuit Theory I (ELG 2138, in progress), Calculus I (MAT 1341), Calculus II (MAT 1722).

TECHNICAL SKILLS

Electronics: resistive circuits, Ohm's and Kirchhoff's laws, voltage dividers

PCB Design: KiCad, Altium Designer, schematics, PCB layout

Simulation and Instrumentation: Multisim, multimeter, oscilloscope, function generator

Programming and Development: Python, Java, JavaScript, HTML/CSS, SQL (basic), Git/GitHub, Jupyter, Arduino IDE

IT Systems and Tools: Ubuntu, Windows imaging, TOPdesk, Snipe-IT

Languages: French (native), English (upper-intermediate), Spanish (basic)

TECHNICAL PROJECTS

Electrical Team Member, Telemetry September 2026 to Present
uOSupermileage

- Designed a two-layer automotive dashboard PCB end to end in Altium (LED tachometer, turn signals, automatic headlights, USB-C power): schematics, footprints, placement, routing, design rule checks, and Gerber and NC drill files.
- Designing the schematic of a USB sensor board for the car's telemetry system: an MCP2221A bridge reads an MSA311 accelerometer (I²C) and a Hall-effect wheel speed sensor, on the club's 100 × 100 mm DIN-rail format (in progress).
- Participation in soldering, assembly, and vehicle efficiency tests, in coordination with the mechanical and software teams.

Circuit Theory Laboratory Fall 2026
ELG 2138 - University of Ottawa

- Analysis of resistive circuits and validation of measurements using Multisim, a multimeter, and an oscilloscope.

TECHNICAL EXPERIENCE

Online Training and Engagement Assistant May to August 2026
Human Rights Office, University of Ottawa | Ottawa

- Managing a 104-page Brightspace library and creating instructional content with HTML, CSS, and JavaScript, including 20+ videos.
- Applying WCAG 2.0 AA guidelines and quality standards to digital resources.

IT Support Assistant January to April 2026
Faculty of Engineering, University of Ottawa | Ottawa

- Troubleshooting hardware, software, and network issues; preparing Windows images and supporting computers and peripherals.
- Managing requests in TOPdesk, tracking inventory in Snipe-IT, and documenting recurring issues.

IT and Facilities Coordinator September 2023 to June 2025
Les Lauréats School Group | Ouagadougou, Burkina Faso

- Supporting school IT infrastructure (computers, printers, and network), installations, and software updates.
- Training 50+ teachers and students to use digital tools.

AWARD

1st place at the Orange Burkina From Scratch Hackathon (2022), among 135 participants. Development of a medical appointment scheduling prototype as lead developer on a five-person team.
